

education Solutions

The Education Surveillance System of choice for more than a decade

More than ten years of successful installations in primary, secondary and tertiary education institutions have made Intervid one of the most pervasive suppliers of education surveillance equipment.

Look to Intervid's InterVision system to satisfy your education surveillance needs.

Features

- Multi-Tier system management
- IP and Analog CCTV Hybrid solutions
- Mega-Pixel camera support
- SMART Video analytics
- Unlimited scalability
- Access Control Integration
- Remote, multiple facility management capability
- Centralized Alarm Management
- System "Health" Monitoring.

Our solutions meet many of the education environment's primary requirements, including:

- Power and flexibility
- Integration capability
- Real-time system "Health" monitoring and optimal uptime.

Education Solutions Beyond Surveillance

Maximize Your Return On Investment

We have the vision when it comes to providing the solutions

SYSTEM "HEALTH" MONITORING

Perhaps the most under-valued feature of InterVision is the in-depth system "Health" monitoring including:

- Camera failure warnings BEFORE you miss an incident.
- Hard Drive integrity warnings BEFORE you lose video footage or critical events.
- System health status reports to your email automatically BEFORE a system failure.

InterVision offers both real-time AND historic status reports to give you peace-of-mind when it comes to ensuring the uptime of your system.

EDUCATION SOLUTIONS BEYOND SURVEILLANCE

When it comes to providing solutions for the education industry, Intervid has the experience, the expertise and the product.

Intervid views each education environment as a unique challenge and is able to provide a powerful custom solution due to the particular flexibility and scalability of the InterVision system. InterVision solutions go beyond surveillance in offering a sophisticated management tool that enables operators and managers to function in a multi-tiered control environment.

INTERACTIVE GRAPHICAL INTERFACE

The interactive user interface provides a visual representation of one or more facilities.

Operators can navigate through multiple layers of maps to selected facilities, drag-and-drop cameras to selected monitors, control outputs, move PTZ cameras, and perform many other operational actions. Users with multiple facilities can navigate their entire enterprise via the map facility.

sophisticated, robust, integrated education solutions

INTEGRATION

One of the major differentiating features of InterVision is the capability to integrate with many 3rd party systems including:

- Access control
- Fire panels
- Alarm panels

Integration is facilitated by the ability to send alarms and take action upon information received from the various systems.

VIDEO ANALYTICS

InterVision's video analytics algorithms provide valuable tools to improve the effectiveness of the system including:

- SMART Video Motion Detection
- Abandoned Object Analysis
- Post Object Search

The system also integrates with several specialized analytics devices. The analytics software provides "triggers" to the system that enables it to take user defined actions depending on the specific "trigger" received. For example:

- Move PTZ camera to preset position
- Send an alarm to a selected recipient
- Send an SMS or email
- Switch selected cameras to selected monitors
- Switch a device on or off
- Notify a control room Gateway

MULTI-TIERED EVENT MANAGEMENT

Facilities with hundreds or thousands of cameras require a "black-screen" approach to video and event management. InterVision provides this via the Alarm Management Gateway which receives events, associates them with actions and enables the escalation of these events to second and third tiers of management. The events can be triggered by many types of stimuli, including video analytics, alarms, access control events, fire panel events and any 3rd party system integrated with the InterVision Management Suite. The system can control several facilities from a central command center with distributed management.
